

Solvent & Glue information for assembling Swim Teaching Platforms

The Swim Teaching Platform in this box includes lead free PVC fittings and pipework that will require you the user of the product to assemble.

It is important that the correct glue and solvent is used and applied in the correct manner to ensure all joints are secure and best able to withstand the rigours of the learn to swim environment.

The glues & solvents are readily available at hardware and plumbing stores in the region shown.

The use of an incorrect glue and or solvent may void the warranty for your Swim Teaching Platform.

Scan the below QR code to open a video showing how to:

- Clean the fittings and pipework prior to gluing.
- How to and how much glue to apply to the fitting and pipe.
- Clean up of any excess glue.
- Note: This video is using the glue recommended for Australia & New Zealand, please substitute the glue recommended for your region (see below)

Glue Selection

Australia/New Zealand

Pre-gluing pipe/fitting clean: Acetone.

Glue: Plumbers PVC Cement 'Type N' Clear
